Legalize Abortion: A Necessary Evil to Protect Women's Health

Abortion is an issue that has been debated for centuries yet remains one of the most divisive issues in today's society. Despite this, it must be accepted as a necessary evil in many cases.

Abortion can provide medical benefits and help to protect women's rights over their bodies. It can also be viewed as an act of mercy in cases where the fetus has major defects or would not live long after birth.

By allowing a woman to make her own decisions regarding her reproductive health, we are empowering women and giving them control over their lives. This is especially significant for those who may be facing economic hardship and could not otherwise provide for a child, as well as those who are victims of rape or incest.

By providing the option of safe and legal abortion, we can reduce the number of unsafe back-alley abortions that result in severe injuries or fatalities. In addition to health benefits and protecting women's rights, legalizing abortion is also beneficial from an economic standpoint.

Not only does it reduce the burden on public health care, but it also eliminates the need for costly post-birth care that would be needed if the pregnancy was carried to term. Furthermore, providing access to abortion can reduce the number of children born into poverty, thus reducing the long-term costs associated with poverty.

In conclusion, abortion must be accepted as a necessary evil in many cases. It provides medical benefits, protects women's rights and health, as well economic benefits that cannot be ignored. Allowing women to make their own decisions regarding their reproductive health is essential to creating a more just society. Therefore, it is clear that abortion should remain legal.
