What You Need to Know About the Corona Virus

Diseases and viruses have plagued people all over the world, but a virus called Covid 19 has also come into the world. Covid 19 has spread all over the world. This virus has killed many innocent people. It is a disease that enters people through breathing and the virus is spread by coughing, sneezing and other diseases. Nowhere in this virus is it clear how long it stays in the upper part of the human body, but it is very similar to other corona bacteria. Scientific information shows that the bacteria of this virus can be seen on the human face for a few hours or a few days.

The World Health Organization (WHO) has declared corona virus 2019 (COVID-19) a pandemic. A concerted attempt is wanted to stem the unfold of the virus. Epidemics have been described as "the most common form of the disease and affect the greatest number of people." The covid-19 was first appeared in Wuhan China, known as the corona virus. 'CO' represents the corona, and the 'VID' virus.

The outbreak of Corona virus 2019 (COVID-19) has created a global health crisis that has profoundly greatly affected our daily lives and our planet. Infection and transmission patterns are not only a threat to the whole world, but measures have been taken to prevent the spread of the virus everywhere. People need social exclusion in addition to natural practice, Such as corporate comfort for people. Physical danger, social and physical confusion in our lives, what role can all these different media channels have at the social level and why?

Social media has long been considered good and powerful all over the world. Because any news in the world, whether it is related to politics, or whether it is worldly, all the information comes on social media which goes all over the world. Social media is identified with research over time, including TV, radio, the Internet, mobile phones, laptops and more. Social media has a profound effect on how we view ourselves as individuals and as citizens.

Some precautions of COVID-19 are as below:

- Wash your hands frequently
- Keep a distance of at least two feet
- Be sure to use an outside sanitizer
- Make sure you wear a mask when you go out, it will keep germs out of your breath.
- If you are feeling sick or tired, you must see a doctor

Corona virus is affecting people with many diseases, so it is important for everyone to take precautions. And the biggest challenge is that we've been dealing with this since World War II. In 2019, the virus spread throughout Asia, with the exception of Antarctica, which gradually spread to every content. Corona cases are increasing every day in Africa in the United States. The disease is spreading so fast in every country that the rush of patients in hospitals is increasing due to which lockdown has been imposed everywhere. Travel has been banned, wedding halls have been closed, flights have been stopped, entry from foreign countries to domestic countries has been banned.

In many large cities, people have been urged to stay indoors to reduce the spread of corona, restaurants, theaters, schools, concerts, support events, large gatherings have all been closed. 25 million people have lost their jobs because of Corona.

The corona virus has severely affected the financial health of many people. A lot of people have lost their jobs and a lot of people want to get a job so they don't go out of the house because of Covid 19. The journey from 2019 to now has been very difficult for people. Whenever such a difficult time comes to our people, we should help the people as much as possible so that no one will face difficulties in the future.
